- % Completed: 100%
- % Scenery: 95%
- Control: NCE DCC Sound, wireless throttles
- Access: Elevator to 2<sup>nd</sup> floor

Model railroaders who are residents at Foxdale Village, State College, Pennsylvania formed a model railroading group in late 2014. After securing a space in 2015, they began construction of the Foxdale Model Railroad in 2016. There is 680' of track on the layout, with 82 turnouts, all controlled by Tortoise machines with frog power routing. The layout was designed to fit in the room for show. It is a double track mainline, each 106' long with 36" minimum radius curves. Areas on the layout are named after founding members and helpful staff that made the room possible for this use. Most of the equipment that is on the layout is from members' former home layouts.
