- Style: Proto Freelance
- Era: 1966
- Scale: HO
- Size: 24' X 30'
- % Completed: 100%
- % Scenery: 50%
- Control: NCE DCC Sound
- Access: Stairs to Basement

The HO scale Forks Ridge Railway (FRRY) is a proto-freelanced design based heavily on PRR practices set in 1966. It features a double mainline approximately 150' each. At its highest point, it has a junction where the FRRY ties into the PRR. The FRRY circumnavigates the basement back to the junction. It has 2 coal mines, a quarry and petroleum depot. There is also a small engine facility and yard for the FRRY. The lower portion features an agricultural area, farm and small village with two industries. It also has an extensive yard and engine facility for the PRR, which will include several industries. It is wired for DCC using NCE products. All turnouts are controlled by toggle switches.
